

【物理化学特論】 6. Hückel approximation

No. : _____ Name : _____

- (1) Write down the secular determinant for cyclobutadiene under Hückel approximation.
- (2) Determine the energy levels for cyclobutadiene by solving the secular equation given in (1), and put the electrons in the molecular orbital appropriately.
- (3) Determine the delocalization energy for cyclobutadiene, and compare with that of 1,3-butadiene.
